pycco_main.py

Example

```python
delete_background_start = '<div class="highlighted-line-1">'
add_background_start = '<div class="highlighted-line-2">'
background_end = '</div>'

def highlight(sections, language, preserve_paths=True, outdir=None):

    print(sections)

    ...

    for i, section in enumerate(sections):
        section["code_html"] = highlight_start + shift(fragments, ""

        if section["docs_text"].startswith('===ADD==='):
            section["docs_text"] = section["docs_text"][9:]
            section["code_html"] = add_background_start + section["c
        elif section["docs_text"].startswith('===DEL==='):
            section["docs_text"] = section["docs_text"][9:]
            section["code_html"] = delete_background_start + section

        ...

        section["num"] = i

        print(section["docs_html"])
        print(section["code_html"])

    return sections

'#===DEL==='
'print(section["docs_html"])'
'print(section["code_html"])'
'#'
'Must use another # to split the code block'
```
